

WEEKLY PROGRESS REPORT

Name: Gauri Bagherwal

Domain: Python Development / AI Internship

Date of Submission: 01-07-2026

Week : 02

I. Overview

During the second week of my internship, I continued improving my Python programming skills and started working on project-related tasks. I focused on understanding the project workflow, practicing coding concepts, and completing assigned activities. This week helped me gain practical knowledge and increased my confidence in programming.

II. Weekly Activities

1. Python Learning

- Practiced Python concepts such as loops, functions, lists, tuples, dictionaries, and file handling.
- Solved basic programming problems to improve logical thinking.
- Learned how to write clean and readable Python code.

2. Project Work

Project Name: Python Development Project

- Understood the project requirements and objectives.
- Worked on small project modules and tested Python programs.
- Improved code structure and fixed syntax and logical errors.
- Learned the importance of writing reusable and efficient code.

3. Skill Development

- Improved debugging techniques.
- Learned how to use Python documentation for solving coding issues.
- Practiced coding regularly to strengthen programming skills.

III. Achievements

- Successfully completed the assigned learning tasks for Week 2.
- Improved understanding of Python programming concepts.
- Wrote and tested multiple Python programs successfully.
- Enhanced debugging and problem-solving skills.

- Developed confidence in working on project-related tasks.

IV. Challenges and Hurdles

During this week, I faced a few challenges while understanding advanced Python concepts and debugging programs. Some coding errors took time to identify and resolve. I also found it difficult to understand the logic behind certain problems initially.

To overcome these challenges, I:

- Practiced coding daily.
- Used the Python Official Documentation for reference.
- Watched online tutorials to understand difficult topics.
- Debugged programs step by step until the errors were resolved.

V. Lessons Learned

This week taught me several important lessons:

- Consistent practice improves programming skills.
- Debugging is an important part of software development.
- Reading documentation helps solve problems more effectively.
- Breaking a large problem into smaller parts makes coding easier.
- Writing clean and organized code improves readability and maintenance.

VI. Learning Resources

- Python Official Documentation
- Online Python Tutorials
- Coding Practice Platforms
- Internship Learning Materials
- Practice Programs and Exercises

VII. Next Week's Goals

- Learn Object-Oriented Programming (OOP) in Python.
- Work on more advanced project modules.
- Improve coding speed and accuracy.

- Practice more real-world programming problems.
- Continue enhancing debugging and problem-solving skills.

VIII. Additional Comments

The second week of my internship was highly productive and informative. I improved my Python programming skills through continuous practice and project work. I also gained confidence in solving programming problems independently. I look forward to learning advanced concepts and contributing more effectively to the project in the coming weeks.
