

WEEKLY PROGRESS REPORT

Name: Gauri Bagherwal

Domain: Python Development / AI Internship

Date of Submission: 08-07-2026

Week: 03

I. Overview

During the third week of my internship, I focused on improving my understanding of Object-Oriented Programming (OOP), file handling, exception handling, and Python modules. I completed coding exercises, practiced real-world programming problems, and strengthened my debugging and problem-solving skills. This week helped me write more structured and efficient Python programs.

II. Weekly Activities

1. Python Learning

Learned Object-Oriented Programming concepts such as Classes, Objects, Constructors, Inheritance, and Polymorphism.

Practiced file handling operations like reading, writing, and appending data.

Studied exception handling using try, except, finally, and custom exceptions.

Explored Python modules and packages.

2. Project Work

Project Name: Python Development Project

Applied OOP concepts in small Python programs.

Developed programs using file handling and exception handling.

Improved program structure and code organization.

Tested programs and fixed logical and syntax errors.

3. Skill Development

Enhanced problem-solving and debugging skills.

Improved code readability using functions and classes.

Practiced writing reusable and modular Python code.

Learned better coding standards and documentation practices.

II. Achievements

Successfully completed all Week-03 learning activities.

Built Python programs using OOP concepts.

Implemented file handling and exception handling successfully.

Improved debugging efficiency and coding confidence.

Enhanced understanding of structured programming.

III. Challenges and Hurdles

During this week, I faced some challenges while understanding advanced Object-Oriented Programming concepts and implementing exception handling correctly. Managing multiple classes and debugging logical errors required extra practice.

To overcome these challenges, I:

Practiced coding exercises regularly.

Referred to Python Official Documentation.

Watched online tutorials for better understanding.

Tested programs step by step to identify and resolve errors.

Revised concepts through practice examples.

IV. Lessons Learned

This week taught me several valuable lessons:

Object-Oriented Programming makes code reusable and organized.

Exception handling improves program reliability.

File handling is essential for data storage and retrieval.

Regular practice improves coding confidence.

Writing clean and modular code simplifies future development.

V. Learning Resources

Python Official Documentation

Online Python Tutorials

Internship Learning Materials

Coding Practice Platforms

Practice Programs and Assignments

VI. Next Week's Goals

Learn advanced Python concepts.

Work on larger project modules.

Improve coding speed and accuracy.

Practice more real-world programming problems.

Continue enhancing debugging and logical thinking skills.

VII. Additional Comments

The third week of my internship was productive and helped me strengthen my Python programming skills. I gained confidence in applying Object-Oriented Programming concepts, file handling, and exception handling in practical programs. I look forward to learning more advanced topics and contributing effectively to future project tasks.
