

WEEKLY PROGRESS REPORT

Name: Gauri Bagherwal

Domain: Python Development / AI Internship

Date of Submission: 15-07-2026

Week: 04

I. Overview

During the fourth week of my internship, I focused on strengthening my Python programming skills through practical coding and project-based learning. I continued working on advanced Python concepts, improved my debugging techniques, and practiced writing clean, reusable, and efficient code. This week helped me gain more confidence in solving real-world programming problems.

II. Weekly Activities

1. Python Learning

- Practiced advanced Python concepts and improved programming logic.
- Revised OOP concepts with practical examples.
- Worked on Python modules, functions, and code optimization.

2. Project Work

- Solved coding exercises.

Project Name: Python Development Project

- Continued working on project modules.
- Improved project structure and code organization.
- Tested different program functionalities.
- Fixed syntax and logical errors.
- Enhanced code efficiency.

3. Skill Development

- Improved debugging techniques.
- Strengthened problem-solving skills.
- Practiced writing clean code.

III. Achievements

- Successfully completed all assigned Week-04 tasks.
- Improved understanding of advanced Python concepts.
- Enhanced debugging efficiency and coding confidence.
- Optimized project code for better performance.
- Developed confidence in handling project tasks independently.

IV. Challenges and Hurdles

I faced challenges while debugging complex programming logic and organizing project code efficiently. To overcome these challenges, I practiced coding regularly, reviewed Python documentation, tested programs step by step, watched online tutorials, and revised difficult concepts through practical exercises.

V. Lessons Learned

- Writing clean code improves maintainability.
- Debugging requires patience and logical thinking.
- Regular coding practice improves confidence.
- Code optimization makes programs more efficient.
- Proper planning before coding reduces errors.

VI. Learning Resources

- Python Official Documentation
- Online Python Tutorials
- Internship Learning Materials
- Coding Practice Platforms

- Project Practice Exercises

VII. Next Week's Goals

- Complete more project modules.
- Learn advanced Python libraries.
- Improve coding speed and accuracy.
- Practice real-world programming challenges.
- Enhance debugging and software development skills.

VIII. Additional Comments

The fourth week of my internship was productive and helped me strengthen my programming knowledge through continuous practice and project work. I improved my debugging skills, coding efficiency, and confidence in solving programming problems. I look forward to learning more advanced technologies and contributing more effectively to the project in the coming weeks.
